

Watershed Conditions Statement – Water Safety

Message Number: 2025-01
Issued: March 4, 2025, at 2:00 PM EST
From: NBMCA Duty Officer, Angela Mills

Watershed Conditions Statement – Water Safety: indicates that high flows, unsafe banks, melting ice or other factors could be dangerous for users such as anglers, boaters, swimmers, children, or pets. Flooding is not expected.

If you have a flood emergency, please contact your municipality. If you live in an unincorporated township, please contact the Ministry of Natural Resources (MNR) – North Bay District.

A **Watershed Conditions Statement – Water Safety** is in place for the North Bay-Mattawa watershed.

Current Conditions:

Water levels on area lakes and rivers are generally at or slightly below normal for this time of year. Moisture content in the snowpack is an average of 137.7 mm (as of Feb 28), which is normal for this time of year.

Current water levels can be viewed by searching Station Names “Ottawa River”, “Mattawa River”, “Chippewa Creek”, “La Vase River”, “Wasi River”, and “Lake Nipissing” at https://wateroffice.ec.gc.ca/search/real_time_e.html

Forecasted Conditions:

Environment Canada has issued a Special Weather Statement for the North Bay – Powassan – Mattawa area, forecasting 15-25 mm of rainfall is possible tonight (Mar 4) through tomorrow night, with the possibility of exceeding 25 mm in localized areas. Temperatures are forecast to be slightly above freezing today, remain near freezing overnight, and reach a high near +5 °C Wednesday (Mar 5). Temperatures will return to below freezing for Thursday and precipitation will transition back to snow. Mild temperatures, especially overnight, combined with rainfall will trigger melt from the snowpack.

Water levels on the Ottawa River are managed by upstream dams and reservoirs operated by provincial and federal governments. Forecasts are available at <https://ottawariver.ca/>

The water level on Lake Nipissing is regulated by dams operated by the federal government. Forecasts are available at <https://www.canada.ca/en/public-services-procurement/services/infrastructure-buildings/bridges-docks-dams/frenchriver-dam.html>

Historic Flood Conditions:

For comparison, in response to 34.5 mm of steady rain over 12 hours with frozen or saturated soil conditions and minimal remaining snowpack in March 2024, the water level on Chippewa Creek increased by 83 cm over 15 hours, peaking about 3 hours after rain ended.

Risk:

Forecasted warm temperatures and rain will trigger snow melt and increase hazardous conditions around lakes, rivers, and streams. Rain on frozen conditions may result in rapid changes in water levels on urban creeks in the City of North Bay, especially during and after periods of intense precipitation. Water levels in the watershed will increase and localized flooding is possible in low-lying areas. Increased flows may impact shoreline ice stability. Widespread flooding is not expected at this time.

All residents, especially those in low lying areas, are encouraged to monitor the conditions that are developing. Banks adjacent to rivers and creeks are very slippery at this time and when combined with cold open water, pose a serious hazard. The public is encouraged to keep children and pets away from watercourses and off waterbodies.

Municipalities are encouraged to monitor water crossings for debris that may affect the movement of water through culverts and bridges. A close watch on local conditions and updated forecasts and warnings from Environment Canada is also recommended.

Staff at the North Bay-Mattawa Conservation Authority will continue to monitor weather and watershed conditions and update this message based on the changing weather and streamflow conditions.

This message will be in effect until (or updated before) Monday, March 10, 2025 at 4:00 PM EDT.

The general public is advised of these messages through the www.nbmca.ca website with the flood status icon and a link to information about current conditions. NBMCA also circulates these messages to local media and social media, posting on Twitter (@theNBMCA), Instagram (nbmcainfo), and Facebook (NBMCA).

The public is invited to share photos of watershed conditions on social media using #NBMCAFlood.

Terminology: Notification Levels

WATERSHED CONDITIONS STATEMENT: general notices of potential flooding or other conditions that pose a safety risk. There are two kinds of statements:

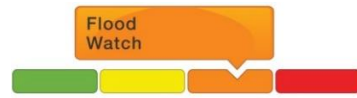

A diagram showing a horizontal bar divided into four colored segments: green, yellow, orange, and red. A yellow callout box labeled "Water Safety Statement" points to the yellow segment.

Water Safety: indicates that high flows, unsafe banks, melting ice or other factors could be dangerous for users such as anglers, boaters, swimmers, children, or pets. Flooding is not expected.

A diagram showing a horizontal bar divided into four colored segments: green, yellow, orange, and red. A yellow callout box labeled "Flood Outlook Statement" points to the yellow segment.

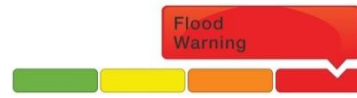

Flood Outlook: gives early notice of the potential for flooding based on weather forecasts calling for heavy rain, snow melt, high wind or other conditions that could lead to high runoff, cause ice jams, lakeshore flooding or erosion.

FLOOD WATCH

A diagram showing a horizontal bar divided into four colored segments: green, yellow, orange, and red. An orange callout box labeled "Flood Watch" points to the orange segment.

FLOOD WATCH: notifies that the potential for flooding exists within specific watercourses and municipalities. Municipalities, emergency services and individual landowners in flood-prone areas should prepare.

FLOOD WARNING

A diagram showing a horizontal bar divided into four colored segments: green, yellow, orange, and red. A red callout box labeled "Flood Warning" points to the red segment.

FLOOD WARNING: notifies that flooding is imminent or already occurring in specific watercourses or municipalities. Municipalities and individuals should take action to deal with flood conditions. This may include road closures and evacuations.
